These days, people like to label themselves as experts in certain things that they know nothing about. This creates a lot of confusion and leads to misinformation that spreads like wildfire. This article will help you identify the difference between a "crack," and a "key," and the many different options in between. It will also provide you with some helpful tips on how to get started collecting full unlicensed software copies for free. Crack vs Key. A crack is a program that enables a copy of a software program to run without the original CD in the drive. A key is a string of numbers and letters that can be used to register software for free online. Got it? Good! Now you know what you need to ask for when someone offers to "fix" or "register" whatever it is that you have. Now here are some helpful tips to get started collecting your own free software copies:

For video games, keys are generally found in the comments sections of popular online video game walkthroughs or forums where fans discuss them, or in places where people often post about strategies to get through difficult parts of a game. For music, keys are generally found in the comments sections of popular online hip hop forums, where fans discuss them.

For movies, both keys and cracks are usually found in the comments sections of popular movie websites.

If you have a little more time on your hands, you can always just google the name of what you're looking for with "download" or "crack" or "keygen" which will bring up even more results.

Once you have obtained your software key/crack/full copy, just follow the instructions on how to install it (included in most free copies), and make sure to keep track of all your free keys/cracks/copies (see Keep Track). Keep Track. In order to keep track of all the free software you have collected, its a good idea to maintain a list on your computer of all the keys, cracks, or full copies you have received. You can use any word processing program or spreadsheet program to do this, just make sure that its saved as a text (.txt) file so that if the police ever ask you to show them your "key collection," you always have a copy that's easy to access.

The Misinformation Misconception. When it comes to collecting free software, there's always at least one person in the comments section that says something like this: "Don't download cracked software! You don't know where it came from! It could be tracking your info and sending it out to hackers on the internet! Don't do it!" Most of the time, people who make comments like this are just trying to protect you. They mean well. But they also don't know what they're talking about, and spreading false information (aka misinformation) can be a lot more dangerous than sharing a key.
